## Skills

## About me

“My expertise lies in Mobile Development, utilizing programming languages such as React Native and Java Spring Boot. I am seeking a professional, reliable, and equitable international work environment to make long-term contributions and foster personal development.”

## Education

● 09/2013 - 07/2017

### FIELD OF STUDY: INFORMATION TECHNOLOGY

TRƯỜNG CAO ĐẲNG CÔNG THƯƠNG TP.HCM

### KEY SKILLS

- Programming language: C++,PHP,javaScript,C#,Python,java
- Framework:Laravel
- Source management: GitHub, SVN
- Database: MySQL,SQL Server
- Frontend:HTML,CSS,Bootstrap,JavaScript

### PERSONAL PROJECT

#### Sales Website Design

Project Description: I developed a dynamic sales website with a flexible and efficient user interface using ReactJS. I used javascript to build the interface components and manage the state of the application. Technology used:

- ReactJS:Used to develop dynamic user interfaces and manage application state
- JavaScript: Used to build interface components and interact with users.
- Stripe:Used to process secure online payments.

## Projects

### 11/1/2024 - 24/1/2024 | App Loyaty Coff

I have developed a complete cafe management application using C# programming language and implementing a 3-layer model with ADO.NET. This application allows cafe managers to perform tasks such as managing product lists, ordering, calculating bills, managing customers, and tracking sales.

v Technology and techniques used:

- o Programming language: C#

- o ADO.NET 3-Layer Model: Used to manage data and interact with SQL Server databases.

- o WinForms: User interface built using Windows Forms to provide an easy-to-use interactive experience for users.

- o SQL Server: Used to store and manage data.

v Main function:

- o Manage product listings and prices.

- o Place orders and calculate invoices for customers.

- o Manage customer information and transaction history.

- o  Revenue tracking and statistical reporting.

Describe project:

I have developed a complete cafe management application using reactnative programming language and this application allows cafe managers to perform tasks such as managing product lists, adding to cart, placing orders.

v Technology and techniques used:

- o Programming language: react native

- o front end: react native, navigation

- o javaspringboot: Used to manage data and interact with my sql database

- o Database: my sql

v Main function:

- o Register, Login

- o Manage product listings and prices

- o Manage shopping cart

- o Order
